TOSHIBA AIR CONDITIONING VISION

Better Air Solutions

Through our commitment to world-class efficiency, versatile scalability and leading quality, Toshiba Air Conditioning advances leading-edge technologies to find the most forward-thinking solutions possible for your world.

Z Senses of smartness

Because understand your real needs, we have searched for and finally found 7 senses of smartness in air conditioning, which we have innovately developed into the most advance technologies SMMS-7 this VRF is cooling optimized for hot and humid temperature.

Product line up

>>>> Sense of efficiency

Higher energy efficiency

>>> Sense of space

Space saving and light weight

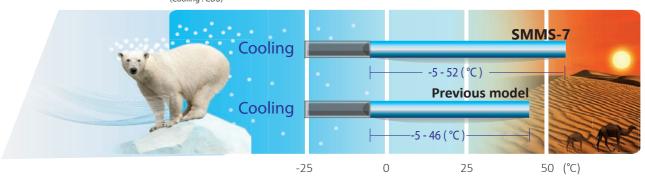

>>> Sense of endurance

Wider ambient operation

Outdoor temperature range

The combination of new compressor design and system controls have enabled SMMS-7 to expand its allowable operational temperature range

Operation ambient temperature expansion

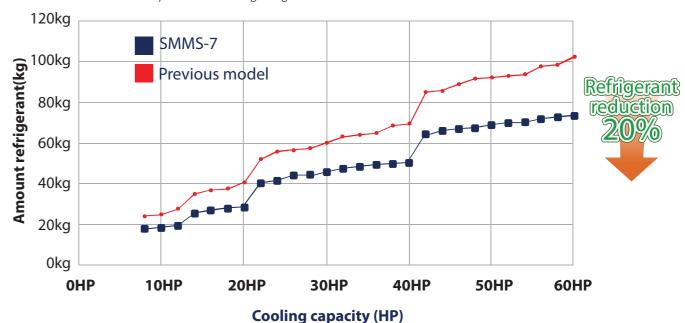

Note : Based on equivalent piping length of 7.5 m and piping height difference of 0 m.

>>> Sense of care

Environmentally - oriented

Reduce refrigerant amount

More than 20% by delicated cooling design*

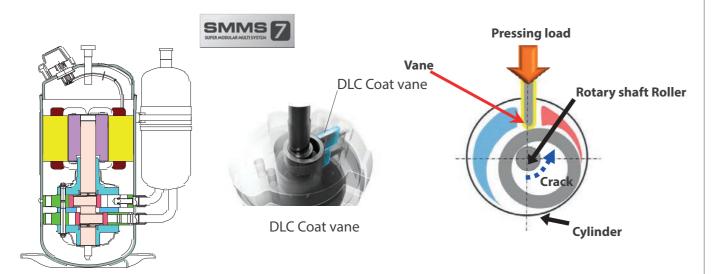

* Testing under controlled conditions

High reliability

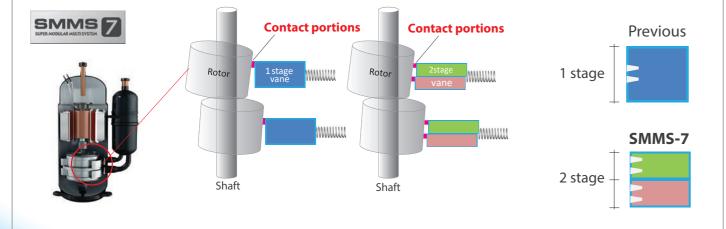

DLC (Diamond like carbon) coated vane

Diamond Like Carbon (DLC) protection coating inside "All compressor's vane" increases efficiency and reliability

2-stage vane

2 stage vane reduce friction and results in a significiant improvement in reliability and performance.

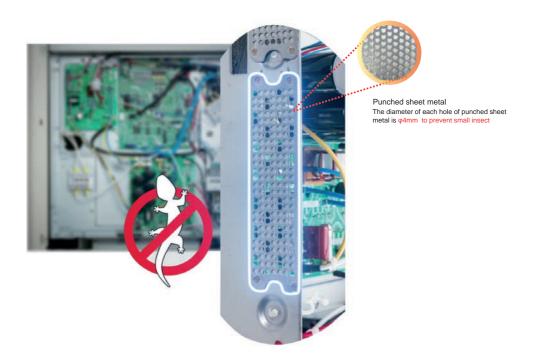

>>> Sense of strength

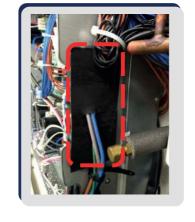

High reliability

Small animal protection

To prevent the small animals from entering and interfering with the electronic components in the system, our new inverter box has been upgraded with additional protection, while allowing reliable operation. The inverter box is fitted with punched sheet metal & resin sheet.

In order to stop small animals get into inverter box, SMMS-7 has resin sheet. It's preventive measure to keep them from shorting out PC boards.

SMMS7

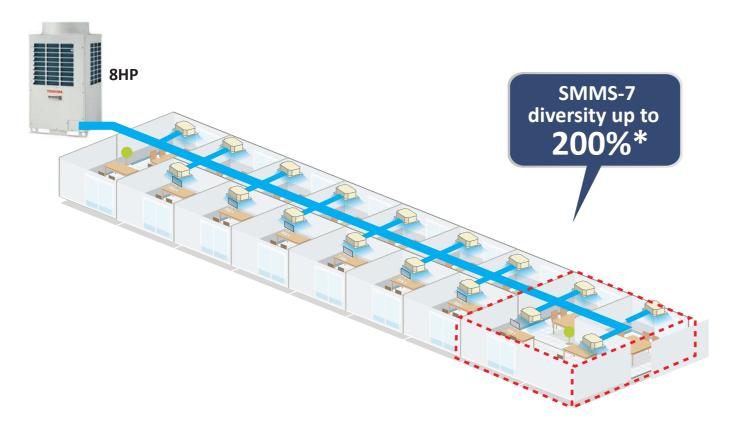

>>> Sense of flexibility

Design flexbility

200 % Maximum diversity

Thanks to the newly developed refrigerant circuit, the diversity of outdoor units has drastically increased. This makes it much easier to design for installations with many rooms or offices.

>>> Sense of flexibility

Design flexbility

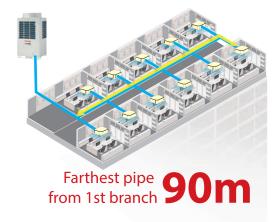

Total piping length

Applied with Toshiba's unique and greatly improved technology, SMMS-7 can reach up to 1,000 meters maximum piping length.

Farthest pipe from 1st branch

Even more convenient with the piping distance from the first branch to the furthest indoor unit at 90 meters, increasing the flexibility of the installation within the hotel or office building.

Farthest equivalent length

The maximum equivalent distance between outdoor unit and farthest indoor unit tops at 235 meters, which tops the industry class.

Height between indoor units

Another industry's top class is a maximum vertical distance between indoor units which reaches up to 40 meters, equal to an entire 11-storied building. SMMS-7's enhanced piping capabilities result in more benefits for the system design, installation flexibility, as well as the less installation cost.

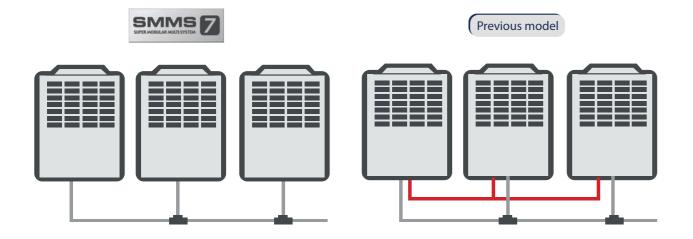

Sense of convenience

Easy installation and maintenance

Installation flexibility

New system of oil management, balance pipe no longer required.

Easy maintenance

Secure space for maintenance in machine area. Temperature control of liquid pipe leads to removal of liquid tank, leading to reduce refrigerant.

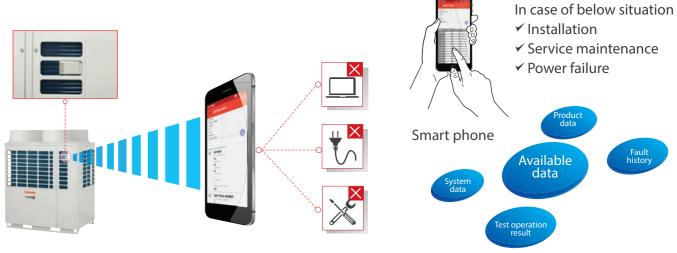

SMMS wave tool

With SMMS wave Tool, you can read and write data from outdoor unit directly on your smart phone without the needs of connecting PC or opening cabinet.

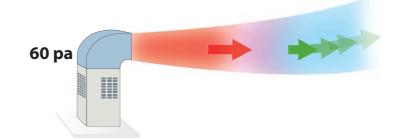

By the new smart phone application, the testing and commissioning can be done without opening the cabinet.

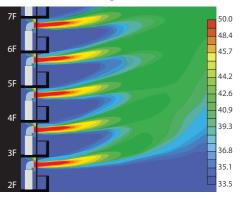

*Smartphone specification : Android $^{\text{TM}}$ OS 5.0

The external static pressure

The SMMS-7 units are suitable for challenging installations where high external static pressure performance

Air flow simulation diagram

Note: This result is analytical simulation, that does not guarantee actual temperatures.

Model: MMY-MAP2207T8P-SG, MMY-MAP2207T7P MMY-MAP2407T8P-SG, MMY-MAP2407T7P

Model Name ØΑ

MMY-MAP2207T8P Ø28.6

MMY-MAP2407T8P Ø34.9

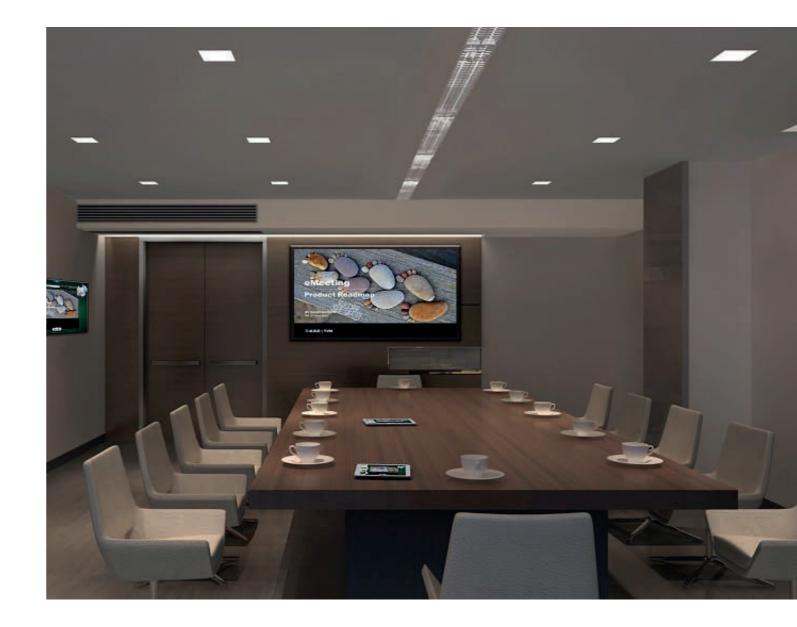

Liquid pipe connection port 19.1

(Unit:mm)

(Note

- If there is an obstacle at the upper side of the outdoor unit, set the top end of the outdoor unit 2000mm apart from the obstacle.
- Limit the height of the obstacle surrounding the outdoor unit to 800mm or less from the bottom end of the outdoor unit.
- Draw out the pipe procured locally to the front of the outdoor unit horizontally, and keep 500mm or more between the outdoor unit and traversing pipe if placing pipe transversely.
- Dimensional drawing of corrosion heavey protection model is the same as that of standard model.

^{*}Super slim duct MMD-AP***6MPHY, P means coming with drain pump.

^{* 60}Hz (7P) Models Only

^{**} Do not connect to refrigerant piping from outdoor unit.

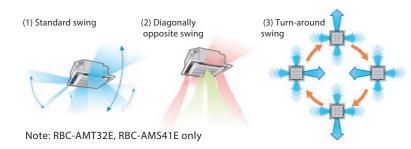

Individual louver control

The angles of each of the four louver can be set individually => Enables airflow to be adapted to user preferences.

Easy installation

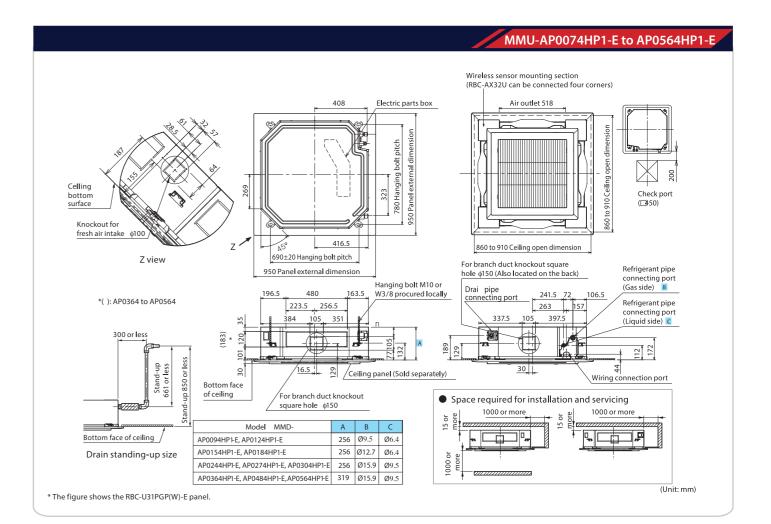

The panel is attached using the bolt already installed on the indoor unit.

^{*} Figures in parentheses are for ceiling panels.

Note 1: The capacities are measured under the conditions specified by JIS B 8615 based on the reference piping

The reference piping consists of 5 m of main piping and 2.5 m of branch piping connected with 0 m height.

Note 2: The sound level are measured in an anechoic chamber in accordance with JIS B 8616.

Normally, the values measured in the actual operating environment become larger than the indicated values due to the effects of external sound.

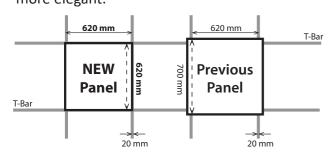

Note: Rated conditions Cooling: Indoor air temperature 27°C DB/19°C WB, Outdoor air temperature 35°C DB

Superior design with compact chassis

This compact unit $(620 \times 620 \text{ mm})$ fits with flat panel perfectly into ceilings and matches standard architectural modules without the need to cut ceiling tiles, makes your room look more elegant.

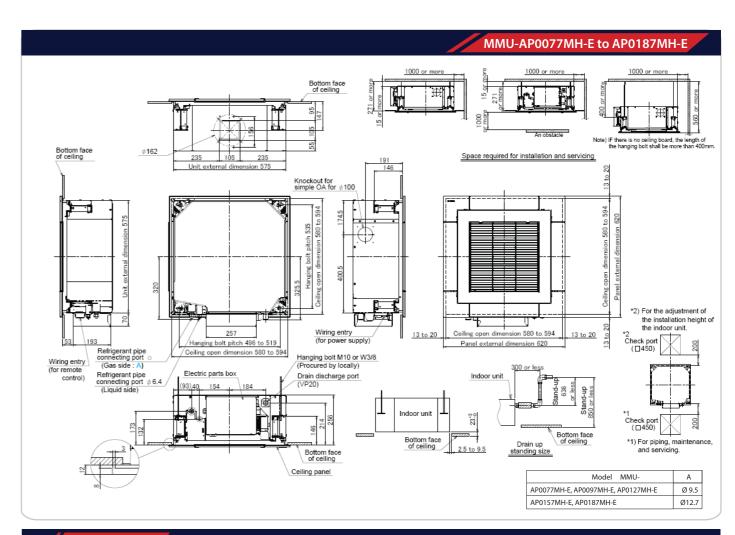

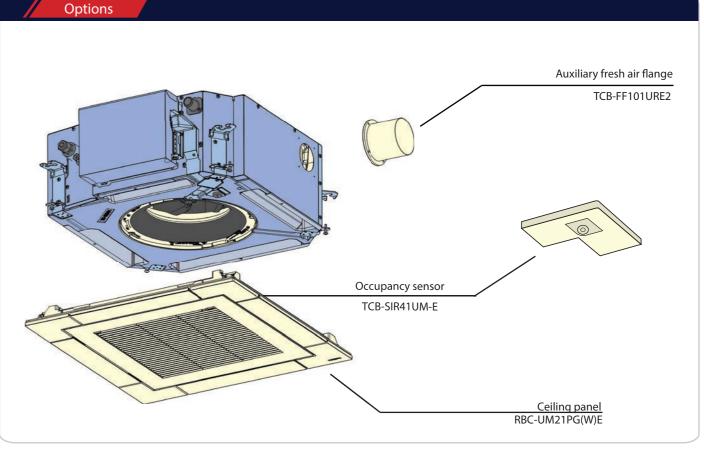

Individual louver control*

The wind direction and swing operation can be set individually by each louver, which can be set into memory for future use. Furthermore, the optional occupancy sensor also improve efficiency energy.

The perfect choice for hotels and reception areas

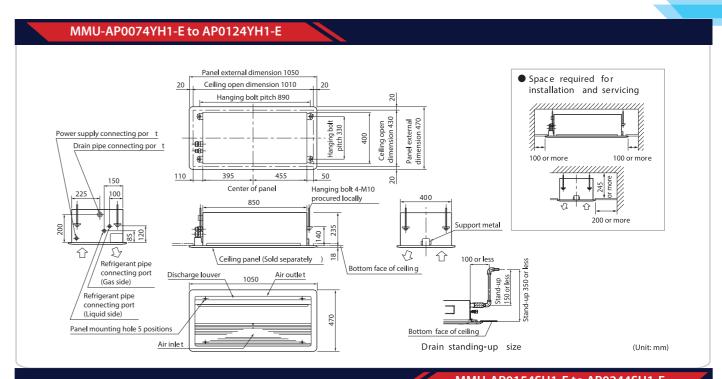

Silent sound design ensures the quiet required for the office.Ideal for smaller rooms where one-way air distribution is required. Able to blow air straight out. Condensate drain pump included. Long-life filters fitted as standard.

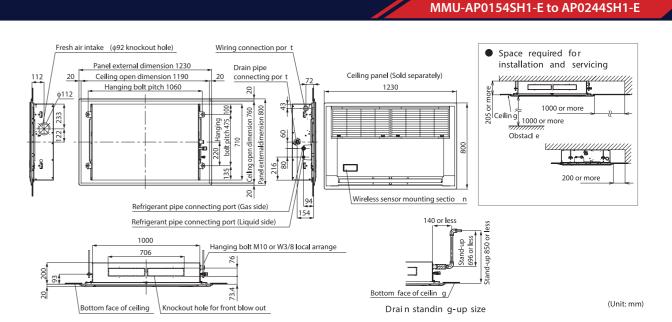

Fresh air intake is possible (MMU-AP***4SH1-E)

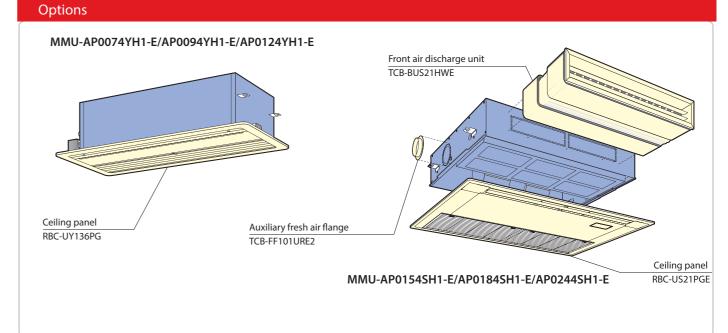

Preparations/connection possible with a circle duct flange.

Note 2: The sound level are measured in an anechoic chamber in accordance with JIS B 8616.

 $Normally, the values \ measured in the \ actual \ operating \ environment \ become \ larger \ than \ the \ indicated \ values \ due \ to \ the \ effects \ of \ external \ sound.$

Note: Rated conditions Cooling: Indoor air temperature 27°C DB/19°C WB, Outdoor air temperature 35°C DB

Only 210 mm in height for greater application flexibility. 4-step static pressure setup. Concealed installation within a ceiling void. Auxiliary fresh air intake available

Slim & quiet

Perfect comfort throughout the room. Can be used with any style of air diffuser. Quiet, powerful operation.

Air Conditioning for large building.

Design flexibility

Satisfies all your design needs. Compatible with external static pressures up to 250 Pa.

Can be equipped with the following options:

- Long life filter kit
- Drain pump kit

Construction characteristics

Seven-stage-switchable static pressure. The flexible duct is accessible. Easy service and installation. Inspection hole enables easy access and maintenance.

*Built-in Drain-pump: up to 6 HP model

- Mount chassis directly
- Upside down mountable
- Removable to both left and right

High static pressure

External static pressure can be raised as high as 120 Pa, so that all areas of the room can be reached for even temperature distribution, no matter how complex the layout.

High-lift drain pump

Built-in high-lift drain pump up to 850 mm.

Smooth curve for pliant shape

All-new chassis and new rounded design, This new models have been developed in response to customers' needs for ceiling units that better match their room interiors.

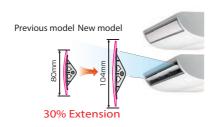

New fan has adopted the turbulence prevention rib to optimize the ventilating way.

Air volume has increased and noise level also has decreased compared with previous model. Winds of new ceiling type of 4HP to 6HP can be reached up to

New designed wide flap

The new air outlet has realized both high noise reduction and large air volume.

Flap control

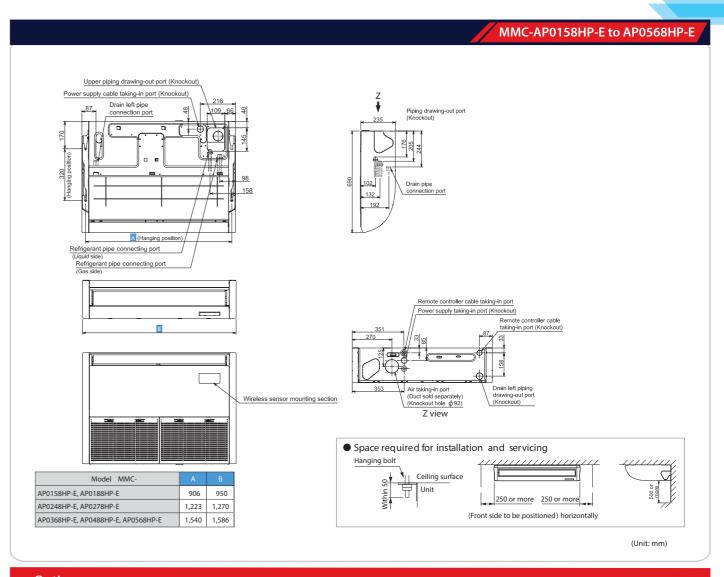

The airflow angle is automatically set to the most suitable setting according to your cooling or heating needs, and an automatic swing mode enables airflow to reach all areas of the room to create a comfortable ambience.

Key features

The Dx-coil interface enables the connection between third party AHU and TOSHIBA SMMS-7 with maximum capacity of the connectable AHU up to 60 HP for multiple Dx-coil (TA Control Type) interface and 20 HP for single Dx-coil (DDC) interface.

Air controller for fresh-air intake

Fresh-air intake often influences the system, rendering normal control of the air conditioner difficult, or placing large loads on the system and its cooling performance.

Therefore it is frequently adopted to handle the fresh air to a certain condition before the fresh air will enter in the main air conditioner.

This device is known as a fresh air intake indoor unit.

For some application need to get all fresh air intake connect to VRF system, SMMS-7 are available connected to 1-3 Fresh air Units up to 22 HP

NOTE: The fresh air intake indoor unit is an air conditioner provided to handle the fresh air load and is not to control the room temperature. For correspondence to the load of the indoor air controller, set an air conditioner separately.

- * The setting temperature is 16 27°C (standard FCU...18 29°C).
 * An optional humidifier is not available with fresh air intake indoor unit.
- Height difference between fresh air intake indoor units must be within 0.5 m. Height difference between fresh air intake indoor unit and standard FCU must be within 30 m.

NOTE 1 Rated conditions Cooling: Outdoor air temperature 33°C DB/28°C WB setting temperature 18°C
Heating: Outdoor air temperature 0°C DB/-2.9°C WB setting temperature 25°C
Piping: Length 7.5 m / Height 0 m

NOTE 3 Normally, the values measured in the actual operating environment become large than the indicated values due to the effects of external sound.

*When supply air temperature is 5°etting temperature + 3°C" or less, fresh air intake indoor unit operates as FAN mode.

*When supply air temperature is 19°C or less, Fresh Air Intake Indoor unit operates as FAN mode.

Greater comfort and reduce load

Functionality built into the cooling system reduces load Supply and exhaust fan speed ratios can be changed on cooling beyond that of the heat exchanger itself. This improves air quality and ensures maximum comfort the needs of the environment and location. throughout room being cooled.

Flexible control

for improved air volume control that best matches

Free cooling at night

When the air outdoors is cooler at night, the system expels warm air from the room. This reduces the air conditioning load the next day for improved energy efficiency.

Remote controller NRC-01HE

^(*1) Cooling and heating capacities are based on the following conditions:

Cooling capacities are based on: indoor temperature: 27 °CDB/19°CWB, Outdoor temperature: 35°CDB

Heating capacities are based on: indoor temperature: 20 °CDB, Outdoor temperature: 7 °CDB/6°CWB Fan is based on High and Middle

*If high humidily air (about 80% or more of relative humidity), such as fog, is inhaled by the Heat Exchanger, dew condensation water may trickle from a main body.

^{():} The figures in () indicate the heat reclaimed from the heat recovery ventilator

Greater comfort and reduced load

Easily integrated into air conditioning systems of 150 m³/h to 2000 m³/h air volume, the air-to-air heat exchangers use exhaust air to pre-condition the incoming air, thus reducing the cooling or heating load and the overall size of the required system.

efficiency.

Easy maintenance

Free cooling at night

The heat exchange element can be washed in water.

When the air outdoor is cooler at night, the system

expels warm air from the room. This reduces the air

conditioning load the next day for improved energy

Flexible control

Supply and exhaust fan speed ratios can be changed for improved air volume control that best matches the needs of the environment and location.

Remote controller NRC-01HE

* Do not connect to refrigerant piping from outdoor unit. Control wires can be connected.

Wired remote controller

Wired Remote Controller RBC-AMS55E-ES RBC-AMS55E-EN

Wired remote controller with a built in 7-day timer-featuring a new multi-language,

LCD display with backlight, energy saving options and a return back function.

- Possibility to set and display the room name to easily set-up and monitor the working parameter.
- New modern and desirable controller design with menu driven display.
- Save mode by schedule timer to optimise energy consumption.
- Room temperature display always available.
- Two "Hot Keys" (F1, F2) for easy operation of air conditioner functions.
- Easy to read layout including display of indoor unit model name and serial number.
- Built-in backup power. Settings are kept in memory up to 72 hours in case of power failure.
- Remote TA sensor available in controller.
- Can be connected to a single indoor unit or a group of up to 8 indoor units.

Wired Remote Controller

- RBC-ASC11E
- Compact size H86mm x W86mm x D16mm · Stylish design with big screen and backlight
- Schedule timer (off only)
- Operation mode, error code display
- Temperature control in steps of 0.5°C

Standard Remote controller RBC-AMT32E

Standard wired remote controller can be connected to a single indoor unit or a group of up to 8 indoor units.

Power save operation limits the greatest current value. The remote controller allows error to be displayed while the protective device works or a error occurs.

Remote controller with weekly timer (7-day timer function) RBC-AMS41E

- Clock display
- Schedule timer:

Possible to program schedule timer (7-day timer) function

Possible to program 8 functions for each day of the week

"The following items can be set in program: operation time, operation start/stop, operation mode, temperature setting,

restriction on button operation

Wireless remote controller

TCB-AX32E2

Stand alone receiver

compact 4-way cassette,

2-way air discharge cassette,

(MMU-AP***4YH1/SH1-E)

(For 4-way air discharge cassette,

ceiling, concealed duct standard,

slim duct, floor standing cabinet,

floor standing, 1-way discharge cassette

Wireless remote controller kit & sensor unit (receiver unit)

- Start/Stop Changing mode Temperature setting
- · Air flow changing
- Timer function Either "ON" time or "OFF" time or "CYCLIC" can be set how many 30 min. later ON or OFF is operated.
- Control by 2 remote controllers is available. Two wireless remote controllers can operate one indoor unit. The indoor unit can then be operated separately from the two different locations
- Check code display

RBC-AX33CE Integral receiver (For ceiling) (MMC-AP**8HP-E) (MMU-AP***4SH1-E)

RBC-AX32U(WS)-E Integral receiver (MMU-AP***4HP1-E) (For 4-way air discharge cassette)

RBC-AX32UW(W)-E Integral receiver (MMU-AP***2WH1) (For 2-way air discharge cassette)

RBC-AX32UM(W)-E Integral receiver (MMU-AP***7MH-E) (For compact 4-way discharge cassette)

Central remote controller

Central remote controller

TCB-SC643TLE

- Overview
- Compact size 120mmx120mm with 3.2 inch display
- Touch button with stylish design
- Multi languages (English, Chinese, French, Spanish)
- Simple one touch All On/Off function
- Multiple display mode (All, Zone, Unit) to control and monitor
- Operation
- Individual operation of 64 indoor units available
- Weekly Schedule Operation* (ON/OFF) * Schedule timer necessary
- Monitoring
- Zone setting (up to 10 zones)
- Alarm display

Schedule timer

TCB-EXS21TLE

- Schedule timer
- 6 programmings per day
- Enabling 8 groups to be programmed
- A maximum of 64 indoor units can be controlled
- A maximum of 100 hours back-up power supply
- Weekly timer mode
- 7 types of weekly schedule and 3 programmings

Other

Remote sensor

TCB-TC41LE

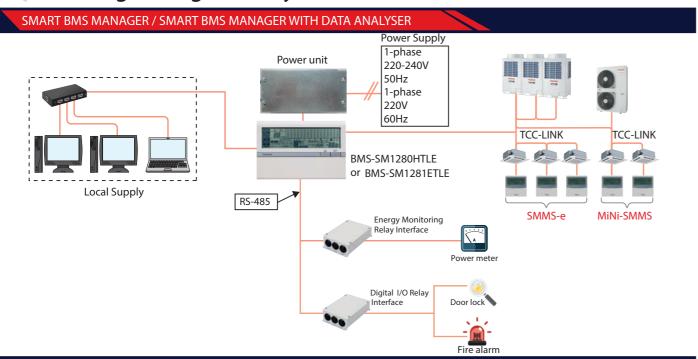

Install this sensor when outside air has been introduced or when over cooling are being minimised.

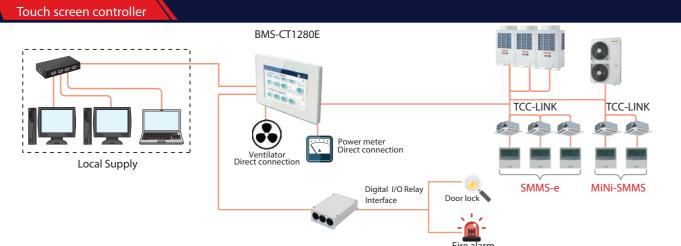

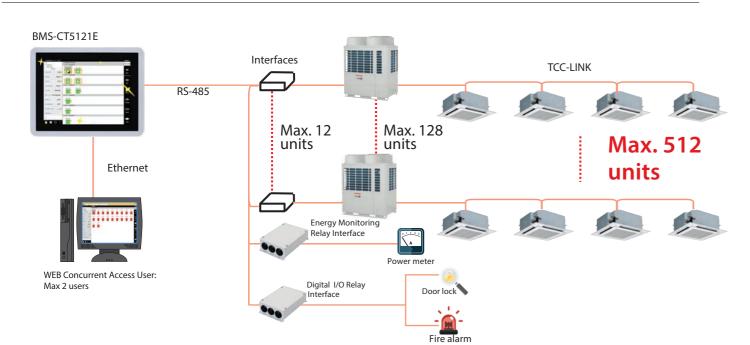

Wired remote controller for air to air heat exchanger NRC-01HE

- Up to 8 units of the Air to Air Heat Exchanger can be operated using this remote controller.
- Control by 2 remote controllers is available. Two remote controllers can operate a single Air to Air Heat
- Air conditioning units may be controlled in addition to controlling the Air to Air Heat Exchanger.
- Central control allows linked ON/OFF operation of air conditioner and Air to Air Heat Exchanger.
- Central control can be set to allow standalone operation of the Air to Air Heat Exchanger.
- Switchable ventilation modes (Automatic/Air to Air/Normal)
- Switchable ventilation air volume (Extra-high/High-Low)

Building management systems

SMART BMS MANAGER

BMS-SM1280HTLE

TOUCH SCREEN CONTROLLER BMS-CT1280E

Individual

Web browser control software

- List View available Displays all Indoor units in one screen
- Set View available how basic Indoor unit settings on main screen
- Advanced operation and master schedules functions available
- · Advanced operation and master schedules can be set on a calendar
- Up to 4 concurrent users can be connected
- Up to 32 user accounts can be programmed with different levels of access (at least 1 must be administrator level)
- Energy monitoring and billing functions are available. Power meter locally supplied energy.
- Additional digital I/O device is available
- Thin profile controller and separate power supply unit enables easy installation.

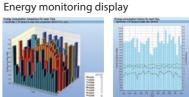

won iF DESIGN AWARD 2019, with intuitive control via slide switch icons and meter dashboard.

- Easy control and user friendly interface on the touch screen controller. • Attractive UI and multiple display design for Business (Office/shop)
- and Residential use.
- Compact size 136mmx205mm with 7 inch colour display
- Simple one touch All On/Off function
- Simple monitoring for multiple indoor units monitoring and control without PC (up to 128 IDUs)
- Direct DI/DO or Power meter I/P without relay interface.
- Weekly schedule setting and special days setting.

SMART MANAGER WITH DATA ANALYSER BMS-SM1281ETLE

3D energy view

Daily energy view

TOUCH SCREEN CONTROLLER BMS-CT5121E

- Touch screen controller
- Using the touch screen controller provides a clear display and enables easy operation.
- A maximum of 512 units / groups are controllable.
- Energy monitoring and billing application
- Power meter locally supplied Energy Web connection
- Layout diagram function (Option)

LAYOUT DIAGRAM FUNCTION (OPTION)

Relay Interface BMS-IFWH5E For Energy Monitoring to connect power meter

Relay Interface BMS-IFDD03E Fto connect external digital input/output

Relay Interface BMS-IFLSV4E For TCS-NET (Max. 64 FCU/Unit)

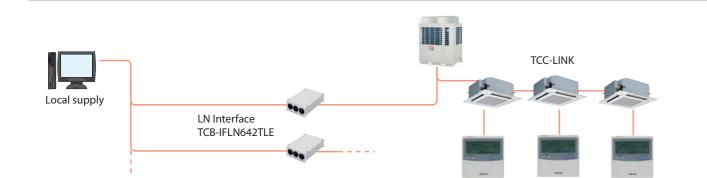

FEATURES

- · Icon display
- Return back function
- Save & demand control for outdoor unit
- Ventilation unit control & monitoring
- Setting temp. range control
- · Setting temp. shift
- Layout diagram function (Option)

Open network systems

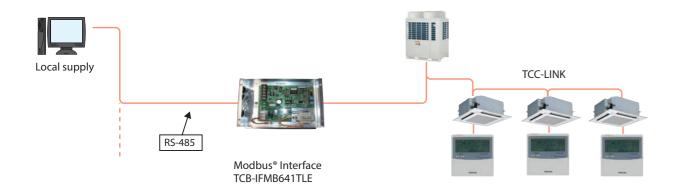

Modbus®

72

LonWorks®

Intelligent Server BMS-LSV9E

BACnet® Server Software BMS-STBN10E

Relay Interface BMS-IFLSV4E

For TCS-NET

BACnet[®]

The BACnet® system operates in conjunction with the BACnet®. Server uses object signals to provide the following functions:

- ON/OFF - Temperature setting

- ON/OFF
 - Operation mode

Monitoring

- Temperature setting
- Room temperature
- Local remote controller: permit / prohibit

BMS-IFBN640TLE

BACnet[®]

The BACnet® system operates in conjunction with the BACnet®. Server uses object signals to provide the following functions:

Control - ON/OFF

- ON/OFF - Operation mode

Monitoring

- Temperature setting - Temperature setting - Fan speed
- Max 64 FCU Room temperature
 - Local remote controller: permit / prohibit

LN Interface TCB-IFLN642TLE

• LonWorks® LN Interface

The LonWorks® interface manages the SMMS-e air conditioning system as a Lon device to communicate with the custormer's Building Management System and to monitor operational status.

Monitoring

- ON/OFF

A maximum of 64 units / groups are controllable per interface.

SNVT signal

Signals and provides the following functions:

Control

- ON/OFF
- Temperature setting
- Fan speed - Max 64 FCU
- Operation mode - Temperature setting
- Room temperature
- Local remote controller : permit / prohibit

Modbus® Interface TCB-IFMB641TLE

• Modbus®

The Modbus® interface manages the SMMS-e air conditioning system as a Modbus® device to communicate with the custormer's Building Management

Accessible to 64 units / groups per one TCB-IFMB641TLE, 15 TCB-IFMB641TLEs on one Modbus® Master (prepared by user).

Signals and provides the following functions:

Control

- ON/OFF
- Temperature setting
- Fan speed
- Max 64 FCU
- Monitoring - ON/OFF
- Operation mode - Temperature setting
- Room temperature
 - Local remote controller: permit / prohibit

- 1. LonWorks*: Registered trademark Echelon corporation.
 2. BACnet*: ANSI/ASHRAE 135-2008, A data Communication Protocol for Building Automation and Control Networks.
- 3. Modbus® is a registered trademark of Schneider E.

Application controls

TCB-PCDM4E

Size: 71 × 85 (mm)

Power peak-cut control

Feature

The upper limit capacity of the outdoor unit is restricted based on the outdoor power peak selected setting.

Function

Two control settings are selectable by setting SW07 on the interface P.C. board on the outdoor unit.

TCB-PCMO4E

Size: 55.5 × 60 (mm)

Snowfall fan control

Feature

The upper limit capacity of the outdoor unit is restricted based on the outdoor power peak selected setting.

External master ON/OFF control

Feature

The outdoor unit starts or stops the system.

Night operation (Sound reduction) control

• Featur

Sound level can be reduced by restricting the compressor and fan speeds.

Operation mode selection control

Feature

This control can restrict the selectable operation modes.

TCB-PCIN4E

Size: $73 \times 79 \text{ (mm)}$

Error/Operation output control

Feature

Enables external output of error and operation signals.

Compressor operation output

Feature

Enables external signal output for each compressor that is in operation within any given outdoor unit. This feature provides a practical method for calculating total operating times for each compressor.

Operating rate output

Feature

External output of system operating rates enables remote monitoring of operating conditions.

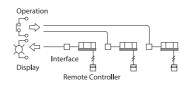

TCB-IFCB-4E2

Remote location ON/OFF control box

• Featu

Start and stop of the air conditioner is possible by an external signal and indication of operation/ alarm externally.

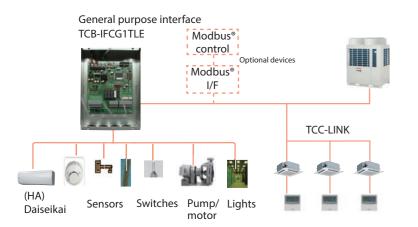

Monitoring

ON/OFF status (for indoor unit)
Alarm status (system & indoor unit stop)
ON/OFF command
Air conditioner can be turned ON/OFF by the
external signals.

The external ON/OFF signals will initiate the signals shown below.

General Purpose Interface

Concept

- Controls the operation status of each indoor unit.
- ON/OFF control of peripheral equipment via the relay point of Toshiba's BMS. (1pt only)

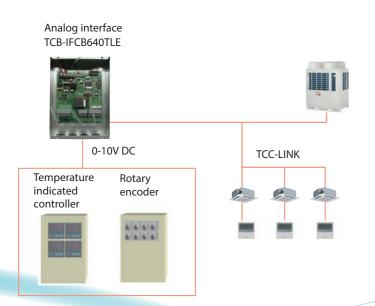

Standard function

Central remote controller and Building Management System devices can control ON/OFF function via digital I/O ports.

Optional function

Control using the following channels: 4-channel relay control, 6-channel digital input, 2-channel analog voltage input and output, and 2-channel temperature measurement functions via Modbus® I/F.

Analog Interface

Concept

- Provides access to 64 indoor units.
- Does not require special network knowledge.
- Can control each indoor unit on TCC-LINK, (on/off, temperature setting, airflow volume, louver position), and monitor status based on 0-10V DC voltage input
- Enables relay control and status monitoring of general-purpose I/F TCB-IFCG1TLE.

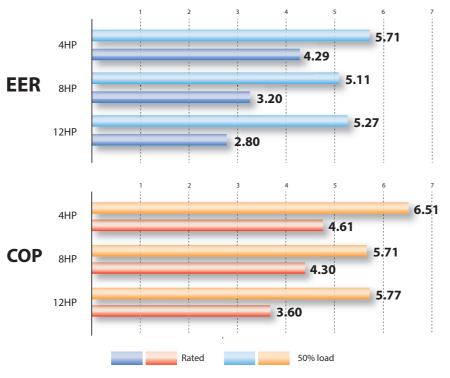

TOSHIBA TOSHIBA

HIGHER Energy Savings

Industry-leading energy savings

Energy-efficient performance for greater eco-consciousness

Adopting the highly efficient DC twin-rotary compressors and advanced vector-controlled inverteres realize EER of 5.71 (under 50% partial load, 4HP). Greater operating performance is now possible when operating under a constant load.

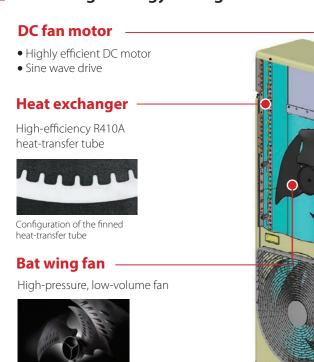

4HP: MCY-MAP0401HT/HT2D 8H P: MCY-MAP0804HT8/HT7 12H P: MCY-MHP1204HT8

*Rated condition

Cooling : Indoor air temperature 27 °C DB / 19 °C WB, Outdoor air temperature 35 °C DB Heating : Indoor air temperature 20 °C DB, Outdoor air temperature 7 °C DB / 6 °C WB

Toshiba's unique energy-efficient air conditioning innovations and technologies deliver high energy savings.

The bat wing fan realizes low

78 sound level

Vector-controlled inverter

The inverter boosts efficiency by controlling R410A and a twin-rotary DC compressor.

Smooth sine curve realizes higher efficiency and less noise.

Vector IPDU control changes the motor current wave to a smooth sine pattern so that noise emitted from the drive units is greatly reduced.

Twin-rotary DC compressor

Increased, wide-range efficiency is realized.

DC driven motor with rare-earth magnet

- Compact
- Higher efficiency - Higher power motor

Precise manufacturing technology in the

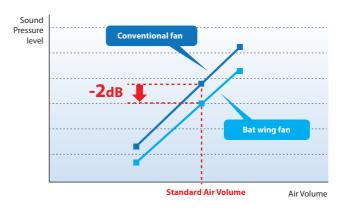

HIGHER Comfort and Ease

Bat wing fan

Fan blade design plays a significant part reducing noise and vibration. Anti-eddy projections and reverse-arc shaped wings reduce air resistance resulting in low operating noise of the outdoor unit.

1-phase outdoor unit

At same air volume, sound is reduced by 2 dB.

Anti-eddy projections
Minimizes the generation of large eddies.

Reverse-arc-shaped wing
Reduces rear turbulence due to less pressure loss.

Night operation (sound reduction) control

(With optional PC board (TCB-PCMO4E) and locally supplied timer / switch)

The unit also comes with a night-time low-noise mode, which reduces operating noise at the programmed activation time. (Timer or switch to be locally obtained)

1-phase outdoor units (2 fan chassis) 3-phase outdoor unit

HIGHER Comfort and Ease

HIGHER Installation and Flexibility

Bat wing fan

Fan blade design plays a significant part reducing noise and vibration. Anti-eddy projections and reverse-arc shaped wings reduce air resistance resulting in low operating noise of the outdoor unit.

1-phase outdoor unit

At same air volume, sound is reduced by 2 dB.

Anti-eddy projections Minimizes the generation of large eddies.

Reverse-arc-shaped wing Reduces rear turbulence due to less pressure loss.

Night operation (sound reduction) control

(With optional PC board (TCB-PCMO4E) and locally supplied timer / switch)

The unit also comes with a night-time low-noise mode, which reduces operating noise at the programmed activation time. (Timer or switch to be locally obtained)

12HP	Cooling	61 dB(A)	50 dB(A)

*Sound pressure level: dB (A)

Small footprint

The outdoor unit has a small physical footprint of only 0.29m² and 0.39m², taking up as little space outside as possible.

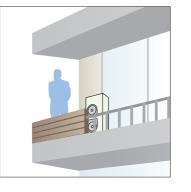

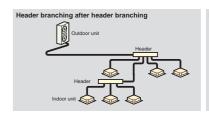

MiNi-SMMS is suitable for balconies

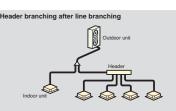

The outdoor unit is compact and expels exhaust air to the side, so it can be installed even in limited spaces as shown.

Shortest route design by free branching

Combination of line and header branching is highly flexible, allowing the shortest route possible thereby saving on installation time and cost. Header branching after header branching is only available with Toshiba systems.

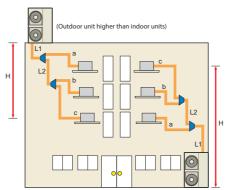

Maximum piping length with PMV kit

Extended refrigerant piping possibilities are possible even with the optional PMV kit installed. 3-phase 6 and 8HP outdoor units have a maximum pipe extension of 180m, and 150m when equipped with PMV kits. On 1-phase outdoor units, piping lengths will differ when PMV kits are used, as shown below.

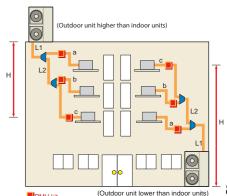

1-phase outdoor units (2 fan chassis)

When PMV kit is not used

Not used	Piping length	Used
180	Maximum pipe extension (Liquid pipe, real length) Piping s ectio n: L1+L2+a+b+ c	150
125	Farthest piping length (equivalent length) Piping section: L1+L2+c	80
	Height difference	
30	Height between indoor and outdoor units (Outdoor unit higher than indoor units) Piping s ection: H	30
20	Height between indoor and outdoor units (Outdoor unit lower than indoor units) Piping s ectio n: H	20

When PMV kit is used

80

Installation and the use of refrigerants not specified by Toshiba Carrier Corporation

Toshiba refrigeration and air-conditioning units are designed and manufactured on the assumption that the product is used with a specific refrigerant suitable for each unit.

We have recently seen some cases where the type of refrigerant used is different from the one originally installed in the product. Such actions may cause mechanical defects, malfunctions, failures and in some cases result in a serious safety issue. Therefore do not install any refrigerant other than the one specified by Toshiba Carrier Corporation for its respective products.

The type of the refrigerant used for each of our products is shown in the accompanying owners manual, or on the product label attached on the product itself.

Toshiba Carrier Corporation shall not assume any liability for failures, malfunctions or safety in its products if the refrigerant used is different from the one specified.

SAFETY PRECAUTIONS

For operation:

• Before use, read through the operating instructions to ensure proper use.

Concerning the purpose for which the air conditioners are to be used

- The air conditioners presented in this catalogue are air conditioning/heating units to be used solely by general consumers.
- Do not use these air conditioners for special applications such as for the storage of food items, animals, plants, precision machines or works of art. Doing so may degrade the quality of the items.
- Do not use these air conditioners for air-conditioning applications in vehicles or ships. Doing so may cause water and/or power leakages.

Precautions for using air conditioners

Concerning the air conditioner's operating conditions and their selection

- (1) Avoid using the air conditioner in the following locations.
- Locations with acidic or alkaline atmospheres (locations at which highly acidic or alkaline air is directly drawn in, such as in hot springs areas from which sulfur gases are given off, or where chemicals, vinegar, exhaust air from burners, etc., are given off) The heat exchangers and other parts may become corroded.
- Locations with atmospheres filled with coolant or other machine oil or steam exhaust (such as at food preparation factories or machine plants). The heat exchangers may corrode; frost may form as a result of heat exchanger malfunction; air conditioner operating performance may be compromised or condensation may form as a result of clogged filters; plastic parts may incur damage; heat-insulation materials may become separated, etc.

Before using an air conditioner in any of the following locations, consult with your dealer or a qualified contractor.

- Locations where vapors from edible oils are given off (such as in bakeries or kitchens and restaurants that use edible oils) ...The air conditioner's operating performance may be compromised or condensation may form as a result of clogged
- (2) filters, and the plastic parts may incur damage. In line with the prevailing conditions, take countermeasures such as tailoring the installation conditions in accordance with the conditions, using air conditioners designed for kitchens or oil guard filters, etc.
- Locations with disinfectant-induced chlorine atmospheres (water tanks, etc.) The metal parts in the heat exchangers, motors, etc., may become corroded.
- · Locations with high salinity (coastal areas, etc.) Corrosion may occur so use outdoor units specifically designed to withstand exposure to salt.

- Locations where power is supplied from independent power generators. The power line frequency and/or voltage may fluctuate, possibly causing the air conditioner to malfunction.
- Locations where high frequencies or electrical noise is generated (from high-frequency welders used for vinyl welding and processing, high-frequency therapeutic devices used for thermotherapy, etc.) The electronic components may be adversely affected, possibly causing the air conditioner to malfunction.
- Locations where electronic equipment is installed. Electrical noise may adversely affect the operation of the electronic equipment.
- (3) Concerning use in locations with high ceilings
- In locations with high ceilings, use of circulators for improving the temperature distribution during heating is recommended.
- (4) Concerning use in high-humidity environments
- When the ceiling-recessed type of indoor unit is installed in a location, such as those described below, and it is very hot and humid inside the ceiling, condensation may form on the external surfaces of the indoor unit and drip down. In such cases, add external heat-insulating materials.
- Locations such as food preparation sites in which the areas above the ceilings are hot and humid
- Locations in which outside air is drawn in and routed above the
- Above ceilings with a slate roof or tiled roof overhead
- (5) Even when an air conditioner is shut down, it will still consume a small amount of power to protect the unit. If the air conditioner will not be used for a prolonged period, turn OFF the main switch (ground fault circuit breaker). However, before the unit is to be used again, turn ON the main switch (ground fault circuit breaker) for at least 12 hours in order to prevent trouble.

Notice: Toshiba is committed to continuously improving its products to ensure the highest quality and reliability standards, and to meet local regulations and market requirements All features and specifications are subject to change without prior notice
